Summary

Theoretical and computational physicist working at the intersection of complex systems, information theory, and artificial intelligence. My research develops physics-based frameworks to study fundamental questions about agency, collective behavior, and the emergence of life — drawing on tools ranging from neuroevolution and machine learning to stochastic simulation and continuum mechanics. I maintain an active publication record in journals including Physical Review, Nature Communications Physics, and PRX Life, and hold active collaborations with groups at Rochester, Delaware, Sherbrooke, and VUB in Brussels, with grant proposals pending at Templeton, Sloan, and NASA. My work is inherently cross-disciplinary, and I have a strong record of building collaborative research programs and mentoring students at multiple levels.

Education

Doctor of Philosophy**, Physics** — Dartmouth College, New Hampshire **2016**
Bachelor of the Arts**, Physics** — University of California, Berkeley **2003**

Research

Department of Physics and Astronomy, University of Rochester — Rochester, New York **2023-Present**

Postdoctoral Researcher/Adjunct Professor

Collaborate with **Adam Frank** and **Gourab Ghoshal** on understanding **information storage, transmission, and processing** in biological, ecological, and societal settings. This work is part of a collaboration with **Artemy Kolchinsky** and **Jordi Pinero** at Pompeu Fabra University under a three-year **Templeton Foundation** Grant, with the goal of operationalizing a theory of **semantic information** using techniques from **stochastic thermodynamics**. Administrative responsibilities include leading **weekly meetings,** organizing a **workshop** at the University of Rochester in 2024, running a **weekly seminar on General Relativity**, and **advising multiple graduate and undergraduate students.** Collaborate with **Matthew Egbert** on **agent-based simulations** of foraging, investigating the informational aspects of both internal and external sensors. Work with **Dora Biro** and **Takao Sasaki** on an interdisciplinary project to map the **information architecture** of **Solenopsis Invicta** during foraging behavior. Develop models of **learning** in **homing pigeon flights** and created the **Layered Agent to Environment Foraging Simulation (LEAFS) framework** for modeling the emergence of **collective problem solving** by colonies.Founded the **Complex Systems and Integrated Information** collaboration in 2023, with responsibility for scheduling speakers and administrative coordination. Collaborate with **Stuart Bartlett, Sylvia Holler, Henderson Cleaves, Mike Wong**, and others on applying **computational mechanics** to pyrolysis data and **exoplanet spectra**. Participate in **Clement Vidal's SETI collaboration** on **technosignatures.**

Thayer School of Engineering, Dartmouth College — Hanover, New Hampshire **2019-2022**

Research Scientist

Collaborate with **Matthew McGarry** and **Elijah Van Houten** on developing a **parallel finite element computational suite** for both **forward and inverse simulations of continuum systems**, focusing primarily on **poroelastic** and **anisotropic Neo-Hookean continuum models** with applications toward **imaging tissue properties**. Assist with **curriculum development** for **Keith Paulsen's Finite Element Course**. Work with **Scott Gordon** on building **Raspberry Pi integrated sensors** for **rheological tests** of multiple porous biological and non-biological materials. Train at the **Center for Surgical Imaging** at **Dartmouth-Hitchcock Medical Center** to run **MRI sequences** on phantoms. Contribute to **grant proposal writing** for **diabetic foot studies** and create a **finite strain adipose-septae model** for foot pad tissue. Collaborate with **Richard Granger** and **Elijah Bowen** in the **Psychology and Brain Sciences** department on a **Riemannian metric** inspired by the **cellular architecture of the eye** for **image similarity judgments**, as well as **differential geometry** approaches toward the **Weber-Fechner law.** Work with **Daniel Reeves** at the **Fred Hutchinson Cancer Research Center** on a **field theory analogue** of **ecological models** applied to interacting systems of heterotrophs and autotrophs. Collaborate with **Marcelo Gleiser, Jeremy DeSilva, Jonathan Carroll-Nellenback**, and others on modeling **information dynamics in groups** of epistemic agents.

Damian **Sowinski**, Ph.D.

Theoretical Physicist | Complex Systems, Information Theory & Artificial Intelligence

Research (Continued...)

Institute for Cross-Disciplinary Engagement, Dartmouth College — Hanover, New Hampshire **2017-2019**

Postdoctoral Scholar

Build the theoretical foundation of **Configurational Information Measures (CIM)** and explore its phenomenology in physical systems with **Marcelo Gleiser.** Develop **pyCE, a Python library** for working with CIMs that also simulates and analyzes **astrophysical** and **cosmological phenomena**, maintaining and optimizing the codebase. Work with graduate students **Michelle Stephens** and **Max Krakow** to ensure continuity of the code base and analysis techniques. Collaborate with **Seth Frey** at **UC Davis** on **data processing and information theoretic analysis** of **NBA video** using the **MaxEnt** method. Work with **Shirley Ho** at the Center for **Computational Astrophysics (CCA)** on **machine learning** approaches for **21cm measurements in cosmology**. Collaborate with **Sonali Mohapatra, Chen Sun**, and **Djuna Croon** on a **Boson star-dark matter** model using **numerical relativity** and finite **difference methods**.

WisPIC, University of Wisconsin — Madison, Wisconsin **2016-2017**

Postdoctoral Researcher

Analyze **information measures** applied to **Ising models on graphs** representing distinct **neurotopologies**. Write and maintain a **statistical mechanics pipeline** for **data generation and analysis**. Work closely with **Sabrina Streipert** on the **split brain phenomenon** and methods for modeling it using both **deterministic and stochastic networks**. Apply **Ising, Potts, and Heisenberg models** on both **lattices and Erdős–Rényi graphs**. Collaborate with **Leonardo Barbossa** on analyzing the statistical properties of **spin glass systems** used to describe **complex network dynamics**.

Beyond Institute, University of Arizona — Tempe, Arizona **2015**

Visiting Scholar

Collaborate with **Sara Imari Walker**, **Hyunju Kim**, and **Alyssa Adams** on **information processes** in biological systems. Develop a model of **stochastic cellular automata** that combines both deterministic dynamics and Ising-like behavior. Analyze the competition between deterministic and stochastic subprocesses in the automata. Work on a **machine learning approach** for understanding the **yeast cell growth cycle**.

Department of Physics & Astronomy, Dartmouth College — Hanover, New Hampshire **2011-2016**

Graduate Student

Develop the use of **Configurational entropy** in field theory under the guidance of **Marcelo Gleiser**. Work on understanding entropic measures relationships to physical systems via an **informational narrative.** Develop code to **simulate Landau-Ginzburg models** on a lattice and extract critical exponents. Learn to write and optimize code in both **MATLAB** and **Python**, master **numerical methods**, and become an expert in **finite difference schemes** as applied to field theory and classical physics.

Hayden Planetarium, American Museum of Natural History — New York, New York **2010-2011**

Research Assistant

Work under **Mordecai Mark Mac-Low** and **Colin McNally** on a modified **GADGET code** to understand the numerically induced viscosity in **hydrodynamic simulations**.Gain extensive experience with **C programming**.

Department of Astronomy, Hunter College — New York, New York **2010-2011**

Research Assistant

Write **Python** code to read and analyze the **spectra of M and L dwarf stars**, characterizing the populations in color space for future photometric surveys by the **Large Synoptic Survey Telescope (LSST)**.

Lawrence Berkeley National Laboratory — Berkeley, California **2000-2003**

Undergraduate Researcher

Work for **Herbert Steiner** in the **KamLAND** collaboration to develop the z-axis deployment arm for detector calibration. Perform **sensitivity analysis** on **photomultiplier tubes**.

Damian **Sowinski**, Ph.D.

Theoretical Physicist | Complex Systems, Information Theory & Artificial Intelligence

Contact

Teaching/Advising

University of Rochester Rochester, New York **2025-Present**

Adjunct Professor

Teaching and developing the **Physics 100: Physics and the Natural World** course for non-STEM majors. Taught **Physics 141: Honors Mechanics** for incoming freshmen hoping to major in physics. Developed a curriculum around **Kleppner & Kolenkow**. Developing the curriculum for all the non-honors physics labs, including organization of lab materials, instructor setup instructions, and student lab manuals.

University of Rochester Rochester, New York **2023-Present**

Advising/Mentoring

Advise **graduate student Sean Kelty** on his work on **information dynamics** in the context of the Ising Model, applying configurational entropy measures to identify critical points with minimal scaling analysis. Advise **graduate student Binod Bhatt** on his first research project involving **entropy estimation** for analyzing functional MRI data. Advise **graduate student Bobbie Markwick** on research simulations using my foraging model. Lead an **advanced topics seminar** titled **"My Favorite Spacetimes"** for graduate and advanced undergraduate students, focusing on specific solutions to **General Relativity**. The first three seminars cover the **history** of the **luminiferous aether** and **Special Relativity, Minkowski spacetime**, and **Rindler spacetime**. Remaining seminars consist of **reading classical papers** on particular spacetime solutions and working out well-known results to give students broad perspective on the subject. Cover both cosmological solutions (**FRW, Gödel, van Stockum**) and stellar solutions (**Schwarzschild, Kerr, Reissner-Nordström, Tolman-Oppenheimer-Volkhoff**).

Thayer School of Engineering Hanover, New Hampshire **2019**

Co-Lecturer

Update the curriculum for **Keith Paulsen's Engineering 105** course on **finite element methods.** Deliver lectures during Dr. Paulsen's travel periods. Maintain **open office hours** to help graduate students with troubleshooting **FORTRAN code**.

RIA Global Education Online Course **2019**

Lecturer

Develop curriculum for and teach a **Physics of Music** online course at the **undergraduate level**. Contribute to coursework development on General Relativity, Cosmology, and Black Holes.

Dartmouth College Hanover, New Hampshire **2011-2016**

Graduate Student Teaching Assistant

Assist teaching **Honors Introductory Physics courses** and build rapport with incoming undergraduates by **organizing extracurricular mathematics and programming sessions**. Serve as TA for courses including classical mechanics, electromagnetism, introductory astronomy, introductory quantum mechanics, advanced quantum mechanics, special and general relativity, cosmology, and quantum field theory.

Hunter College New York, New York **2010-2011**

Educational Consultant

Develop a **Physics GRE test prep course** for the **physics department** and organize tutoring sessions for undergraduates. Teach an introduction to Python course.

Beginning with Children Foundation New York, New York **2008-2011**

Educational Consultant

Develop curriculum for **after-school tutoring** and **test prep programs**, focusing on **mathematics** and the **SSAT**, **SHSAT**, and **SAT** exams. **Mentor students** with academic habits and college applications.

Contact

Teaching/Advising (Continued...)

Launch Education New York, New York **2008-2011**

Tutor

Work with students on **high school level biology** and **mathematics**.

Tutor Associates New York, New York **2005-2011**

Head Physics and Mathematics Tutor

Work with students on **AP physics** and **AP calculus** material, as well as **test prep**. Develop **dynamic spreadsheets** for the company to **analyze student performance** over time.

Celia Cruz Bronx High School of Music New York, New York **2005-2007**

Physics Teacher

Develop the curriculum for and teach the entire spectrum of **physics courses**. Conduct **statistical analysis on student body performance** for the **NYC Department of Education**. Achieve **higher than city average passing rates on the Regents Exams**.

Grace Dodge High School New York, New York **2006**

Mathematics Teacher

Teach the **Math A course** during the summer. Higher than average passing rates on the Regents Exam.

UC Tutors Irvine, California **2004-2005**

Tutor

Work with undergraduates on **physics** and **single/multi variable calculus** coursework. **Math GRE** prep.

SmArT Academy Cerritos, California **2003-2005**

Physics and Mathematics Teacher

Teach physics, **AP physics,** and **AP calculus** courses. **Achieve 100% passing rate on the AP Physics exam**.

Fullerton Community College Cerritos, California **2003-2005**

Head Science and Mathematics Tutor

Work with college students on **introductory chemistry, physics**, **statistics**, and **calculus** courses in the school's **tutoring center**.

Cragmont Elementary School Berkeley, California **2001-2003**

Work Study Teacher's Assistant

Work with **elementary school** children in 1st-4th grade on **basic arithmetic skills**.
